PROFILE

Manufacturing and operations leader with 20+ years building operations that perform under pressure across hyperscale technology, manufacturing, and high-volume intralogistics in Europe and Brazil — the last eight running contract manufacturing operations for global hyperscale technology clients: server, storage, and networking hardware. Designs the systems, routines, and structures that make operations predictable, financially efficient, and stable at scale — from 70 to 500+ people. Full SQDC accountability: shopfloor execution, cost control, quality systems, and senior stakeholder reporting. Deploys MES, ERP, and custom analytics dashboards to close the gap between data and decisions — and applies AI tooling to operational analytics for faster root cause, better forecast accuracy, and lower operational overhead. Drawn to complex, high-tempo environments — manufacturing, hyperscale, defense — where operational clarity is the difference between performance and chaos.

SELECTED IMPACT

70% → 99.7%
First Pass Yield
Lean routines, layout redesign & 5S discipline at WWT's high-volume integration center

7h → 2h
Line-Side Inventory Coverage
Less line-side stock to search through and count at a 500-person hyperscale site

4 → 40+
Fabrication Business
Built from scratch as founder — full P&L across operations, quality & client delivery

PROFESSIONAL EXPERIENCE

Senior Production Manager · World Wide Technology

Nov 2021 – Dec 2025 · Amsterdam, Netherlands · Team: 70+

- Ran end-to-end production and engineering in a high-volume integration center building server, storage, and networking hardware for global hyperscale technology clients — full operational and financial accountability across safety, quality, delivery, cost, and engineering execution
- Designed and implemented a Lean operating system from the ground up: line redesign, 5S discipline, standardized operator routines, and structured root cause methodology — driving First Pass Yield from 70% to 99.7% and eliminating systemic rework cost
- Built and owned a multi-tier management system — daily Gemba walks, shift handover protocols, structured escalation ladders, and weekly KPI governance with senior client engineering and supply chain stakeholders — establishing execution predictability and supporting margin stability across all shifts
- Architected and delivered an MES rollout across multiple production sites — standardized traceability end-to-end, reduced planning errors, and gave engineering and operations leadership real-time cross-site visibility
- Developed a custom analytics layer — real-time dashboards covering forecast accuracy, WIP flow, constraint bottlenecks, and leadership performance — used daily at supervisor, manager, and director level to drive fact-based decisions, reduce escalation lag, and improve cost control
- Built the leadership pipeline: structured 1:1 coaching, individual development plans, and succession mapping across 70+ people — improved retention, accelerated internal promotions, and reduced operational dependency on senior intervention
- Leader 100 Award 2022 & 2023 — 100% team acceptance score, highest trust rating awarded to a leader at WWT

Site Manager · Material in Motion

Nov 2019 – Oct 2021 · Amsterdam, Netherlands · Team: 500+

- Accountable for a 500-person production site assembling and configuring data center hardware for a hyperscale technology client — operating under strict SLA, security clearance, and continuous quality audit requirements
- Reduced line-side inventory coverage from 7 hours to 2 hours by aligning production, client logistics and the 3PL around complete orders within one hour; built on inventory accuracy work begun as Supply Chain Integration Manager
- Maintained 100% SLA continuity throughout COVID-19 by executing rapid workforce restructuring, daily risk reviews, and production layout reconfiguration — zero client penalty and no revenue impact during a period of sustained operational pressure
- Owned cross-functional performance governance — structured weekly reviews with engineering, logistics, planning, and client leadership built shared accountability and eliminated inter-team ambiguity on delivery commitments
- Institutionalized quality and delivery control through standard work documentation, shift-level tier meeting routines, and escalation discipline — embedded across all patterns and sustained under constant volume change
- Developed a frontline leadership layer with sufficient depth to run operations independently across all shifts — reduced reliance on senior management intervention and improved response speed to production variances

Supply Chain Integration Manager · Material in Motion

Jun 2018 – Oct 2019 · Amsterdam, Netherlands

- Owned end-to-end supply chain integration across 3PL partners, production operations, and outbound logistics — accountable for flow continuity, working capital efficiency, and on-time client SLA delivery
- Redesigned material handoff protocols between inbound, kitting, production, and outbound — eliminated transfer delays, reduced inter-stage queuing, and improved throughput predictability across the value stream
- Led operational integration through a full client ERP transition — mapped new workflows, trained cross-functional teams, and monitored adoption to protect continuity, data integrity, and cost control during the changeover
- Resolved escalations across suppliers, logistics partners, and internal planning — reduced unplanned stoppages by establishing clear ownership rules, visual daily controls, and structured issue resolution at the point of impact

Inventory Control Supervisor · Material in Motion

Aug 2016 – May 2018 · Amsterdam, Netherlands

- Led inventory accuracy and stock control in a high-velocity production and logistics environment — full accountability for material availability, count reliability, and variance management across multiple product categories
- Designed and deployed a real-time inventory tracking system that brought accuracy to world-class levels — directly eliminated production stoppages caused by stock unavailability and reduced emergency procurement cost
- Rebuilt cycle count routines and introduced structured root cause analysis for all variances — reduced recurring discrepancies, improved planning forecast reliability, and gave production teams dependable material flow
- Established daily coordination routines between warehouse, production, and planning — created shared stock visibility that cut last-minute escalations, reduced excess safety stock, and improved working capital control

IT Support Specialist, Operations Systems · Milimetra

Jan 2015 – Jun 2016 · Remote · Contract

- Provided remote IT support for around 40 users during my relocation to the Netherlands, maintaining access, endpoints and essential operational tools for the team in Brazil.

General Manager · Milimetra

Sep 2006 – Dec 2014 · Greater Florianópolis, Brazil

- Founded and scaled a business from 4 to 40+ people delivering high-complexity aluminum and glass structural installations — full P&L ownership alongside accountability for operations, quality, and client delivery
- Managed concurrent projects end-to-end across planning, fabrication, site installation, and final inspection — maintained delivery reliability and margin control as project volume and team complexity scaled
- Designed the full operational infrastructure from scratch: performance standards, management routines, and leadership accountability structures — built the foundation that enabled sustained commercial growth and improving cost efficiency
- Partnered with engineering and client teams to resolve technical constraints on live sites — reduced rework rates, tightened specification adherence, and built long-term client relationships based on consistent execution

Production Technician · Milimetra

Feb 2002 – Aug 2006 · Greater Florianópolis, Brazil

- Operated precision fabrication machinery across assembly, quality inspection, and structural build stages — developed technical fluency in production constraints, tolerance management, and end-to-end process dependencies
- Worked directly alongside engineers and site installers on large-scale structural projects — built the shopfloor instincts for reading flow, identifying waste, and anticipating failure that underpin every leadership role since

RECOMMENDATION

> *"Great leaders teach you skills, but the exceptional ones shape how you think and how you lead. Ivan is one of those rare leaders. Under his leadership, I learned a great deal about production management, operational discipline, and leadership in high-performance environments. More importantly, I learned valuable lessons about integrity, humility, and staying grounded while growing in your career."*

CREDENTIALS & AWARDS

Education

BBA International Business — Amsterdam UAS (AMSIB)
2024 – 2027

Certifications

- Lean Six Sigma Green Belt
- CompTIA IT Fundamentals+
- TOEFL iBT — C1 English (Aug 2024)
- Amateur Radio Licence HAREC — PA9ICQ (Jan 2026)

Languages

Portuguese — Native · English — Full professional (C1)

Awards

Leader 100 Award — World Wide Technology
2022 & 2023 — 100% team acceptance as a leader
Highest possible trust score awarded by WWT to a leader.

Core Skills

Lean & CI · MES · ERP · Gemba · 5S · JIT & Pull Systems · Standard Work · Tier Management · KPI Dashboards · Client Governance · SQDC · Traceability · 3PL Management · Leader Coaching · Analytics · AI-assisted Operations

Volunteering

Independent Research Lead — Sosarian
Jan 2026 – Present · AI, assistive technology & human behavior research
